

Eutheria detail

Last Updated Monday, 23 April 2007

The Eutheria node has 17 children nodes (Carnivora, Chiroptera, Insectivora, Rodentia, etc). Each child node is the root for a subtree, each of which is coloured in a different colour:

- Primates are the subtree with the nodes coloured in light purple located near the top of the image. Homo Sapiens is labeled within this subtree.
- The red subtree is the carnivora (canidae, felidae, mongooses, hyenas, etc).
- The large dark purple subtree located in the bottom right corner of the picture is the Rodentia (rats, mice, etc).
